

Cavalry™ EZ

Nonionic Surfactant • Water Conditioning Agent • Humectant

ACTIVE INGREDIENTS

- Monocarbamide dihydrogen sulfate, glycerine, alcohol alkoxyate. 89%
- Other ingredients. 11%

APPLICATION DIRECTIONS

- Cavalry EZ use rates are 1-4 qt/100 gal of water:
 - 1-2 qt/100 gal of water when used as an AMS replacement for “loaded” glyphosate herbicides.
 - 2-4 qt/100 gal of water when used as a nonionic surfactant and AMS replacement for “unloaded” glyphosate herbicides.
 - 1-2 qt/100 gal of water when used with herbicides containing paraquat or diquat.
- Consult a Sabre Initiatives Provider for rate recommendations when using with other pesticides.

PACKAGE SIZE

- 2x2.5 gal
- 265 gal

FEATURES AND BENEFITS

- Premium combination of water conditioning agents.
- Helps to reduce antagonism.
- Unparalleled leaf penetration and coverage.

Cavalry™ EZ is a proprietary blend of water conditioning agents, superior nonionic surfactants and humectants.

Cavalry EZ will help to alleviate antagonism from hard water impurities such as iron, calcium, magnesium and other impurities in the spray solution.

Cavalry EZ will not only maintain certain pesticides, such as glyphosate, in their most active form but it also improves droplet coverage and canopy penetration while slowing droplet drying, all of which combine to increase pesticide absorption into plants.
