

Cavalry™ Cover

Deposition Aid • Drift Control Agent

ACTIVE INGREDIENTS

- Modified vegetable oil, paraffinic hydrocarbons, fatty acids 99.7%
- Inert ingredients 0.3%

APPLICATION DIRECTIONS

- The use rate for Cavalry Cover is 2-6 oz/A.
- Cavalry Cover may be used with any herbicide that requires, recommends or allows the use of a deposition aid and/or drift control agent. Use rates for best results to minimize drift are 4-6 oz/A. Cavalry Cover may also be used with insecticides and fungicides to improve droplet deposition and coverage throughout the plant canopy. Rates used specifically for improving deposition characteristics are 2-4 oz/A.

PACKAGE SIZE

- 2x2.5 gal
- 265 gal

FEATURES AND BENEFITS

- **Best in class drift control.**
- **Unsurpassed droplet coverage while minimizing drift.**
- **Limits fine droplets.**

Cavalry™ Cover is a deposition aid/drift control agent that improves the droplet spectrum of spray solutions without altering the viscosity of the solution. The percentage of fine droplets, which are the most susceptible to drift, is significantly reduced, thereby increasing deposition and reducing drift of the spray away from the target. Cavalry Cover will not significantly increase the number of extremely large droplets that reduce deposition and are susceptible to droplet “bounce.” Spray spectrum will be more consistent and droplets will be closer to optimum size. Cavalry Cover increases spray droplet retention on leaf surfaces while minimizing “bounce” and runoff.
